

Ruminto

Maxdrink

MULTICOMPONENT PREPARATION
FOR COWS AFTER THE CALVING

Very tasty!

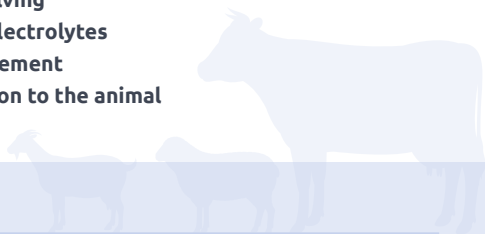

- supplements energy deficiency occurring after the calving
- helps cow to enter lactation
- facilitates the development of microflora in the rumen
- prevents the diseases of perinatal period

Maxdrink

- supports regeneration of the body after calving
- provides a source of energy, vitamins and electrolytes
- counteracts acidosis and abomasum displacement
- high palatability facilitates its administration to the animal

Active substances:

Dextrose

- source of energy
- improves the palatability of the product

Probiotics

- ensure the development of proper microflora in the rumen
- help to prepare the animal for new feeding ratio
- stabilize the pH

Vitamins A, D₃, E

- have a beneficial effect on the body's immunity
- support regeneration after the calving

Electrolytes

- ensure proper hydration of the animal after calving
- accelerate the convalescence process

| Species | Dose | How to use | How often |
|---|-------|--------------------------------|----------------------------------|
|  COW | 1 kg | dissolve in 20 liters of water | once, directly after calving |
|  SHEEP GOAT | 250 g | dissolve in 4 liters of water | once, directly after parturition |
